

E-Commerce Operations SLA Policy

Document control	Value
Document type	Marketplace operations policy
Owner	Marketplace Operations - Logistics Analytics
Approved by	BI Governance Council, Marketplace Operations, Data Stewardship
Audience	Operations managers, logistics analysts, seller success teams, and BI copilot users
Effective date	2026-06-01
Review cadence	Quarterly, or within 10 business days of schema or policy changes
Source basis	Public Olist Brazilian E-Commerce dataset and Marketing Funnel dataset descriptions, plus synthetic governance rules for a BI-agent evaluation corpus.
Confidentiality	Internal use only - sandbox corpus; do not represent as official Olist policy

RAG ingestion note: This document is intentionally authored as selectable text, with stable headings, tables, examples, policy precedence notes, and retrieval keywords. Chunk at section boundaries; preserve tables as Markdown or CSV in the vector index.

Version History

Version	Date	Author / owner	Summary of change
1.0	2026-06-01	AI sandbox generator	Initial two-page demo document.
2.0	2026-06-06	BI Knowledge Management	Expanded into searchable internal-style policy with controls, examples, decision rules, and RAG guidance.

Purpose

This policy defines how marketplace delivery performance should be interpreted. The BI copilot should use this policy when users ask whether delivery performance is acceptable, which regions require attention, or how to prioritize operational follow-up.

Delivery SLA Definitions

Term	Definition	Required data handling
Late delivery	An order delivered to the customer after the estimated delivery date.	Use <code>order_delivered_customer_date > order_estimated_delivery_date</code> .
On-time delivery	An order delivered on or before the estimated delivery date.	Use delivered orders with non-null customer delivery date and estimate.
Average delivery days	Calendar days between purchase timestamp and customer delivery timestamp.	Use <code>DATE_DIFF(order_delivered_customer_date, order_purchase_timestamp)</code> .
SLA analysis population	Delivered orders with known customer delivery dates.	Exclude undelivered orders from delivery SLA denominators.

Performance Thresholds

Metric	Green	Watch	Escalation	Critical
Late delivery rate	<= 8%	> 8% and <= 12%	> 12% and <= 18%	> 18%
Average delivery days	<= 10 days	> 10 and <= 14 days	> 14 and <= 20 days	> 20 days

Metric	Green	Watch	Escalation	Critical
State-level volume requirement	>= 50 delivered orders	30-49 orders: directional	10-29 orders: low confidence	< 10 orders: do not escalate unless requested

Regional Review Rules

- Rank regions by late delivery rate and include delivered order count.
- Do not escalate regions with fewer than 50 delivered orders unless the user asks for small-volume exceptions.
- Include both late delivery rate and average delivery days whenever possible.
- Mention that customer location represents delivery location in this dataset.
- When the top region has high rate but small count, show confidence caveat and compare absolute late-order count.

Seller Operations Rules

- Join through order items when seller-level attribution is required.
- Count distinct orders to avoid item-level duplication.
- Include item count or order count to show volume context.
- Treat seller-level delivery issues as directional when one order includes items from multiple sellers.
- For multi-seller orders, avoid assigning root cause to a single seller without supporting operational data.

Recommended Follow-Up Actions

Status	Recommended next action	What the copilot should not do
Watch	Monitor one additional period; compare average delivery days with late delivery rate; check category concentration.	Do not imply operational failure from a single weak signal.
Escalation	Review fulfillment handoff time; check freight-heavy categories and remote customer locations; compare affected sellers.	Do not invent warehouse root causes.
Critical	Prioritize operational review; identify top contributing sellers, categories, and states; prepare stakeholder summary.	Do not recommend customer compensation unless policy evidence exists.

Example BI Answer Structure

Example: "For May 2018, BA is in Escalation: late delivery rate is 14.2% across 620 delivered orders, and average delivery days is 16.4. Top contributors are furniture_decor and bed_bath_table. This is based on delivered orders with known customer delivery dates; undelivered orders are excluded from the SLA denominator."

Copilot Behavior

- Use this policy only after calculating delivery metrics from the database.
- State threshold labels clearly when applying SLA categories.
- Ask for a date range if the user asks for current performance but no period is provided.
- Never invent operational causes without supporting data.

RAG Retrieval Tests

Test prompt	Expected retrieved sections	Expected answer behavior
What does revenue mean in this BI agent?	Metric definitions; caveats; default filters	Use approved definition, cite default filters, ask clarification if user means GMV or paid amount.
Can a viewer see SQL or row-level seller details?	Access levels; SQL visibility; sensitive data rules	Deny raw detail, provide aggregate summary, explain role limitation.

Test prompt	Expected retrieved sections	Expected answer behavior
Which sellers or regions need attention this month?	SLA thresholds; seller performance rules; incident triggers	Compute metrics first, apply thresholds, include volume and caveats.

Document End

For production use, replace sandbox owners and thresholds with approved policy owners, legal review, actual access-control groups, and validated database schema contracts.
