

Marketing Funnel Qualification Guide

Document control	Value
Document type	Marketing analytics playbook
Owner	Growth Analytics and Seller Acquisition
Approved by	BI Governance Council, Marketplace Operations, Data Stewardship
Audience	Marketing leaders, SDR managers, sales managers, BI analysts, and BI copilot users
Effective date	2026-06-01
Review cadence	Quarterly, or within 10 business days of schema or policy changes
Source basis	Public Olist Brazilian E-Commerce dataset and Marketing Funnel dataset descriptions, plus synthetic governance rules for a BI-agent evaluation corpus.
Confidentiality	Internal use only - sandbox corpus; do not represent as official Olist policy

RAG ingestion note: This document is intentionally authored as selectable text, with stable headings, tables, examples, policy precedence notes, and retrieval keywords. Chunk at section boundaries; preserve tables as Markdown or CSV in the vector index.

Version History

Version	Date	Author / owner	Summary of change
1.0	2026-06-01	AI sandbox generator	Initial two-page demo document.
2.0	2026-06-06	BI Knowledge Management	Expanded into searchable internal-style policy with controls, examples, decision rules, and RAG guidance.

Purpose

This guide defines how seller acquisition funnel performance should be interpreted. The BI copilot should use it when users ask about lead quality, lead origin performance, SDR/SR performance, conversion benchmarks, and time to close.

Funnel Definitions

Term	Definition	Default logic
Marketing qualified lead (MQL)	A seller prospect captured in the marketing qualified leads table.	Use marketing_qualified_leads as the base table.
Closed deal	An MQL that became a won seller deal in the closed deals table.	Left join closed_deals to MQLs using mql_id.
Lead conversion rate	Closed deals divided by MQLs.	Count distinct MQL IDs in numerator and denominator.
Time to close	Days between first contact date and won date for converted leads.	Use won_date only when analyzing closing activity.

Required Funnel Logic

- Use marketing_qualified_leads as the base table.
- Left join closed_deals.
- Count distinct MQL IDs in both numerator and denominator.
- Use first_contact_date as the default date for funnel cohorts.
- Use won_date only when the user specifically asks about closing activity.
- Separate lead generation, conversion, closed deals, and downstream seller revenue.

Conversion and Velocity Benchmarks

Metric	Strong	Acceptable	Watch	Underperforming
Lead conversion rate	>= 18%	>= 10% and < 18%	>= 5% and < 10%	< 5%
Average time to close	<= 20 days	> 20 and <= 45 days	> 45 and <= 60 days	> 60 days or no recent closes
Lead-origin sample size	>= 100 MQLs	30-99 MQLs	10-29 MQLs	< 10 MQLs: do not rank unless requested

Lead Origin Review Rules

- Include MQL count and closed deal count when comparing lead origins.
- Do not rank lead origins by conversion rate alone when MQL count is below 30.
- Mention small-sample caveats for low-volume origins.
- Compare both conversion rate and time to close when possible.
- When channel has high conversion but low downstream seller revenue, recommend downstream seller-quality analysis.

SDR and Sales Representative Review Rules

- Use closed deals for won-deal performance.
- Use MQL base data for conversion performance whenever possible.
- Avoid comparing representatives without volume context.
- Include business segment or lead type when the user asks for deeper diagnosis.
- Do not infer sales effort quality from conversion alone; lead mix and source quality must be considered.

Example Cohort Answer

Example: “For Q1 2018 MQLs, paid_search has an acceptable conversion rate of 12.6% across 410 MQLs, with average time to close of 31 days. Organic_search has a stronger conversion rate but a smaller base. I recommend comparing downstream seller revenue before reallocating budget.”

Copilot Behavior

- Clarify whether the user wants lead generation, conversion, closed deals, or revenue from converted sellers.
- Use benchmark labels only after calculating the underlying metric.
- Explain that a closed deal does not guarantee the seller later generated marketplace orders.
- Recommend follow-up analysis when a channel has high conversion but low downstream seller revenue.

RAG Retrieval Tests

Test prompt	Expected retrieved sections	Expected answer behavior
What does revenue mean in this BI agent?	Metric definitions; caveats; default filters	Use approved definition, cite default filters, ask clarification if user means GMV or paid amount.
Can a viewer see SQL or row-level seller details?	Access levels; SQL visibility; sensitive data rules	Deny raw detail, provide aggregate summary, explain role limitation.
Which sellers or regions need attention this month?	SLA thresholds; seller performance rules; incident triggers	Compute metrics first, apply thresholds, include volume and caveats.

Document End

For production use, replace sandbox owners and thresholds with approved policy owners, legal review, actual access-control groups, and validated database schema contracts.
