

Seller Performance Playbook

Document control	Value
Document type	Seller success operating playbook
Owner	Seller Success Analytics
Approved by	BI Governance Council, Marketplace Operations, Data Stewardship
Audience	Seller success managers, category managers, operations leaders, BI analysts, and BI copilot users
Effective date	2026-06-01
Review cadence	Quarterly, or within 10 business days of schema or policy changes
Source basis	Public Olist Brazilian E-Commerce dataset and Marketing Funnel dataset descriptions, plus synthetic governance rules for a BI-agent evaluation corpus.
Confidentiality	Internal use only - sandbox corpus; do not represent as official Olist policy

RAG ingestion note: This document is intentionally authored as selectable text, with stable headings, tables, examples, policy precedence notes, and retrieval keywords. Chunk at section boundaries; preserve tables as Markdown or CSV in the vector index.

Version History

Version	Date	Author / owner	Summary of change
1.0	2026-06-01	AI sandbox generator	Initial two-page demo document.
2.0	2026-06-06	BI Knowledge Management	Expanded into searchable internal-style policy with controls, examples, decision rules, and RAG guidance.

Purpose

This playbook defines how seller performance should be reviewed using marketplace data. It should be retrieved when users ask which sellers are underperforming, which sellers deserve account-manager attention, or how to summarize seller health.

Seller Health Dimensions

Dimension	Metric candidates	Interpretation caveat
Commercial scale	Revenue, GMV, distinct delivered order count, item count.	Revenue is not profit and excludes freight unless GMV is used.
Customer experience	Average review score, low review rate, complaint keywords when available.	Avoid strong conclusions when review volume is low.
Fulfillment quality	Late delivery rate, average delivery days, freight ratio.	Use delivered orders only; multi-seller orders require cautious attribution.
Concentration risk	Category concentration, state concentration, top product share.	High concentration may be normal for specialized sellers.
Trend stability	Period-over-period revenue and order count movement.	Compare against same-length periods and note seasonality.

Seller Tiering Rules

Tier	Revenue rule	Delivered order rule	Default treatment
Strategic seller	Revenue above BRL 50,000	At least 300 delivered orders	High-touch review; prioritize root-cause analysis before recommendation.

Tier	Revenue rule	Delivered order rule	Default treatment
Growth seller	Revenue from BRL 10,000 to BRL 50,000	75 to 299 delivered orders	Review trend, category mix, and operational risks.
Long-tail seller	Revenue below BRL 10,000	Fewer than 75 delivered orders	Summarize cautiously; avoid over-investing unless risk is severe.

Underperformance and Critical Rules

Label	Conditions	Required answer behavior
Review	At least two of: review score < 3.5; late delivery rate > 12%; average delivery days > 14; freight ratio > 25%; revenue down > 20% period over period; order count down > 20% period over period.	Return metric values, volume context, trend period, and main reason for review.
Critical	At least one of: review score < 3.0 with at least 20 reviewed orders; late delivery rate > 18% with at least 50 delivered orders; revenue down > 40% period over period.	Flag high-priority review; recommend follow-up analysis, not a final business action.
No action	No critical thresholds and fewer than two review conditions.	Summarize health and suggest monitoring if trend is uncertain.

Review Volume Rules

Reviewed orders	How to use average review score
Fewer than 10	Treat as low confidence; do not use as a primary reason for seller action.
10 to 30	Mention limited sample and combine with delivery or revenue metrics.
More than 30	Use normally, while still reporting volume.

Recommended Seller Review Output

- Seller ID and seller city/state when available
- Seller tier and performance label
- Revenue, delivered order count, item count
- Average review score and reviewed order count
- Late delivery rate and average delivery days
- Main reason for review plus confidence caveat
- Recommended next analysis question

Example Output Contract

Field	Example value	Why it is included
seller_id	a1b2... masked or full depending on role	Identifies seller while respecting access policy.
performance_label	Critical	Uses playbook conditions.
main_reason	Late delivery rate 21.4% over 80 delivered orders	Combines metric, threshold, and volume.
next_question	Which customer states and categories explain the late deliveries?	Guides follow-up analysis without inventing cause.

Copilot Behavior

- Use seller rules only after database metrics are calculated.
- Include volume context before recommending action.
- Avoid inventing root causes such as warehouse problems or seller staffing issues unless directly supported by data.
- Recommend follow-up analysis rather than final business action when evidence is incomplete.

RAG Retrieval Tests

Test prompt	Expected retrieved sections	Expected answer behavior
What does revenue mean in this BI agent?	Metric definitions; caveats; default filters	Use approved definition, cite default filters, ask clarification if user means GMV or paid amount.
Can a viewer see SQL or row-level seller details?	Access levels; SQL visibility; sensitive data rules	Deny raw detail, provide aggregate summary, explain role limitation.
Which sellers or regions need attention this month?	SLA thresholds; seller performance rules; incident triggers	Compute metrics first, apply thresholds, include volume and caveats.

Document End

For production use, replace sandbox owners and thresholds with approved policy owners, legal review, actual access-control groups, and validated database schema contracts.
